

Tips for starting with Gentoo

Tomáš Chvátal <scarabeus@gentoo.org>

2014/10/04

Famous last words

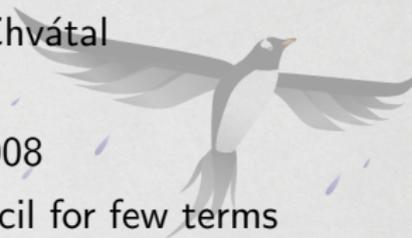

- This switch sounds harmless...
- I am sure it should still boot
- There is no need to update it

Who am I?

Tomáš Chvátal

- Gentoo developer since fall 2008
- Was member of Gentoo Council for few terms
- Currently maintaining libreoffice (hint we need volunteers) and KDE team member
- Works at SUSE and is bossing around bunch of packagers :)

What areas shall we cover

- Interesting applications
- Configuration Tips
- General ideas

Apps list

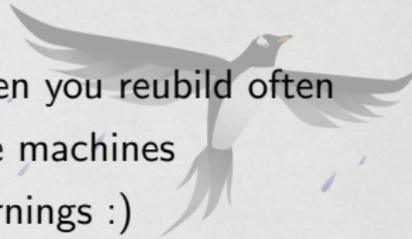

- `eix`: fast pkg searcher with it own index
- `gentoolkit`: set of cool small apps
- `gentoolkit-dev`: another set for development
- `tmux`: screen like provider
- `layman`: overlay management tool

Compilation/development

- ccache: compilation cache when you rebuild often
- distcc: distribute load on more machines
- clang: compile with better warnings :)
- icecream: another approach to distributed CC

/etc/portage/

- keep package.use/mask/. . . as directories
- separate the content by purpose ie
/etc/portage/package.unmask/libav-10
- periodically clean it up (few times a year)

/etc/portage/make.conf

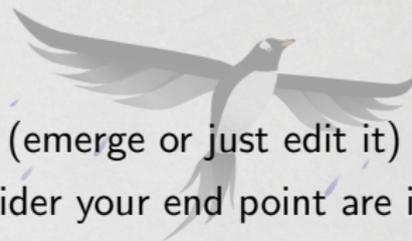

- keep it small
- try to stick with profiles where possible and file bugs if needed
- remember to set good mirrors
- it is defining shell variables so you can keep lines short

/var/lib/portage/world

- Keep this file exceptionally tidy (emerge or just edit it)
- Make sure only apps you consider your end point are in here

Ideas

- Update often: once a month or more
- Consider hardened: safer box is better
- Do not mix: try to avoid using testing/stable mix

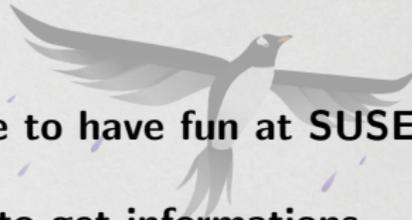

SUSE is Hiring!

We are hiring at SUSE

We are looking for people to have fun at SUSE!

Drop by SUSE booth to get informations.
